DETAILED ACTION

Reasons for Allowance

Claims 1-14 are allowable.

Consider **claim 1**, the best prior art of record found during the examination of the present application, **O'Conner et al. (US 2002/0177406 A1)**, fails to specifically disclose, teach, or suggest a method for receiving first signals and further signals using a receiver, the first and further signals differing in at least one of the transmission parameters: data rate, modulation type, wake-up criterion, synchronization and threshold, comprising the steps of: a) in a first step in a quiescent mode of the receiver, performing receiving and searching for a first wake-up criterion intermittently using a first preset adjustable configuration of transmission parameters tuned for receiving the first wake-up criterion with a first data rate and/or a first modulation type and/or a first threshold; and b) when the first wake-up criterion is not received or found in said quiescent mode, switching the receiver to at least one further configuration different from said first preset adjustable configuration and tuned for receiving a second wake-up criterion and searching for the second wake-up criterion, and c) if said first or second wake-up criterion has been received in step a) or b), switching the receiver into an active mode with a respectively selected configuration.

Claims 2-5 and 14 are allowable because it is dependent upon independent claim

1.

Consider **claim 6**, the best prior art of record found during the examination of the present application, **O'Conner et al. (US 2002/0177406 A1)**, fails to specifically disclose, teach, or suggest a receiver for receiving first signals and further signals comprising a storage device for loading at least two different pre-definable receive configurations, wherein the receiver has a quiescent mode in which it intermittently is turned on to receive and search for a first wake-up criterion using a first preset adjustable configuration of transmission parameters, and the receiver comprises a changeover switch in order to switch to at least one further second configuration different from said first configuration when the first wake-up criterion is not found, and to search for a second wake-up criterion, wherein the receiver is operable to switch into an active mode with said first or second configuration, respectively in case of a successful reception of said first or second wake-up criterion.

Claims 7-9 are allowable because it is dependent upon independent claim 6.

Consider **claim 10**, the best prior art of record found during the examination of the present application, **O'Conner et al. (US 2002/0177406 A1)**, fails to specifically disclose, teach, or suggest a motor vehicle comprising: - a receiver for receiving first signals and further signals comprising a storage device for loading at least two different pre-definable receive configurations, - a first device coupled with said receiver; - a second device coupled with said receiver; wherein the receiver is operable to operate in a quiescent mode in which it intermittently, is turned on to receive and search for a first wake-up criterion using a first preset adjustable configuration of transmission parameters,

Art Unit: 2618

and - wherein the receiver comprises a changeover switch in order to switch to at least a second preset adjustable configuration different from said first preset adjustable configuration when no signal is received and the first wake-up criterion is not found using said first preset adjustable configuration, and to search for a second wake-up criterion, wherein the receiver is operable to switch into an active mode with said first or second preset adjustable configuration, respectively in case of a successful reception of said first or second wake-up criterion.

Claims 11-13 are allowable because it is dependent upon independent claim 10.
